Subject: Ped safety

This may not be a TSP issue but the lighting over crosswalks are poorly placed in some places especially Midtown. We need more lighting especially LED lights.

Also, the alternative bike ped route along 101 is admirable but many people will still use the S curves for the views. There must be a way to widen the path on the east side. Might require a survey and geo study I think it's stable but might require gabions or other reinforcement.
